

Windows 10 PPTP VPN SETUP

1. Click the Windows key and type 'vpn' and hit enter
2. Click "Add a VPN connection" in the Network & Internet Settings window
3. When the "Add a VPN connection" window pops up, fill in the following information:

VPN provider: select Windows (built-in) from the drop down

Connection Name: type name that you will recognize for the connection

Server name or address: enter the DathoVPN server address you have chosen (you can find a list of server in your account details page under the "Servers" link)

VPN Type: select the Point to Point Tunneling Protocol (PPTP) from the drop down

Type of sign-in info: leave the default User name and password

User name: type your DathoVPN username

Password: type your DathoVPN password

"Remember my sign-in info" can be unchecked if you would like to login each time you connect

4. Click the connect button on the VPN you created, after which you should be connected. If you run into any issues, please contact support at support@dathovpn.com
5. Once you have the VPN connection set up, you can connect by either clicking the Windows key and typing VPN to bring up the Network and Internet page where your VPN connections are listed. You can then click the connect button to begin the connection process. The other option is to click your connection status icon down at the bottom-right of your taskbar, then clicking the VPN of your choice.
